Just to be clear, the reason HW04 will be evaluated by the bacterial ID is for several reasons including the history of bacteria in their well and because they treated their water for pathogens. The possible urea is just one more bit of evidence.

Hi Kelley,

I had a question on the homes that we are proposing for the Bacterial ID analysis which are based upon 1<sup>st</sup> rounds total and fecal coliform data. In our conference call this morning you had noted that HW02, HW04, HW08a, and HW35 met that criteria. Rupert then noted that the [Ex. B - Personal Privacy] residence would also be samples for bacterial ID based upon a TIC for urea. I had assumed that there would be the 4 homes plus the [Ex. B - Personal Privacy] home to sample for bacterial ID, but when I looked at the property table in Scribe and saw that the [Ex. B - Personal Privacy] residence was HW04. I wanted to confirm that a total of 4 homes will be sampled for bacterial ID.

Thanks,

Suddha Graves

Suddha -

As discussed - additional info for the re-sampling of the 15 locations.
